

What is claimed is:

1. A resin composition suitable for processing into a biaxially oriented polypropylene film, the composition comprising:

about 70% to about 95% by weight of a polypropylene homopolymer, said polypropylene homopolymer having less than 3% by weight xylene solubles; and

about 5% to about 30% by weight of an ethylene/propylene copolymer, said ethylene/propylene copolymer containing from about 0.5% to about 7.0% ethylene by weight.
2. The resin composition according to claim 1, wherein said polypropylene homopolymer has a crystallinity of at least 55%.
3. The resin according to claim 1, wherein said resin is produced by in reactor blending.
4. The resin composition according to claim 1, further comprising at least one additive selected from the group consisting of: nucleators, anti-oxidants, acid neutralizers, slip agents, antiblock, antifogging agents and pigments.
5. The resin composition according to claim 1, wherein said composition comprises about 70% to about 85% of a polypropylene homopolymer having less than 3% by weight xylene solubles, and

about 15% to about 30% by weight of an ethylene/propylene copolymer, said ethylene/propylene copolymer containing from about 0.5% to about 7.0% ethylene by weight.
